AL-mukhalisy Mushaf Written 353 H =964 AD

Descriptive and Analytical study

Prof. Ghanim O. Al-Hamad

This research deals with studying al-mous'haf which was written by AL-Mukhalisy in 353 H = 964 AD . This study is descriptive , it consists of four sections. The first section gives an introduction about al mous'haf ,its date and its writer. The second section is about the way of writing the words in al-mous'haf and its grammatical marks. The third section describes the beginning of al-Soras, Verses breaks and the chapters in the Quran. The fourth one refers to the artistic motifs and decorations in al Mous'haf.

At Last this research ends with a conclusion of the main results , one of them is the similarity between the Quranic text in al-mous'haf (which passed One thousand years on writing it) and all the other familiar mous'hafs which are well-known today. And praise be to Allah, the Lord of the worlds.

The History of the New Understanding of The Quran

A critique study

Dr. Hassan Mohammed Al-Asmari

This research talks about the history of the new understand -ings of the quran concept, through the comparison between the reading and "construing "Ta'weel" to understand the meaning in a particular way" and the commentary because the comparison explains the meaning of these three concepts, reading, Ta'weel and commentary.

When concerning the concept of reading independently, we can ask what are the tools do reciters of the contemporary readings make use of: the ideologies they follow which affected their conceptions and their ideas. Towards the text of the revelation "The Holy Quran" and what are the applications they applied.

The research started by the first part that deal with the explaining the concept of reading the Holy Quran texts.

The research talks about that previous comparison which gets going from the famous scholars who study the Quranic texts.

The research shows that; the religion field is one of those fields that deal with the commentary concept.

The scholars studying the field of commentary usually deal with the concept of "Ta'weel" and the concept of thinking that deals with the reading.

The second part of the research deals with the modern and the contemporary history for these three concepts: commentary, construing "Ta'weel" and the reading.

According to these three concepts each group of scholars intended a particular aim: The commentary group concerned about reformation of the Muslims nation by connecting them with the Holy Quran. The "Ta'weel" group concerned about facing the invading cultures. And the understanding group concerned about opening the way for the Quranic text and the Prophet's Sayings through new concepts.

And because the subject is about the History of the New Understanding, the research showed the thinking sources that the contemporary readings group can consult these sources.

The last part deals with showing some models and examples that explain the truth of the contemporary readings.

Notices of Al-Imam Al-Dani about Reciters' Illusions

In his book "Jamee Albayan"

Dr. Basem Hamdi Alsayed

The book "Jamee ALBayan-Statement's Collector in the Seven Readings- " of Imam Abu Amr Al Dani is one of the most important and comprehensive book compiled in the "Seven Readings"; and While reading the book, the researcher therein found a lot of rules and issues that are truly in need of study and meditation to take advantage of them, and from that, its admonitions on Readers' illusions; he decided to write a research on Imam Abu Amr Al Dani's admonitions on readers' illusions through his enjoyable book "Jamee ALBayan "exposition and study; and that for the importance of this issue in clearing up God's preservation to his Great Book; where he destined to this Book from the nation's savants who correct what happened as illusion in reports and books of Readings (Qera_at), and the Imam Al Dani is interested in this aspect and has particular compilations in it, the researcher has also counted the positions in which he warned on illusion and they reached "342" positions.

It is of a great scientific subject with a lot of interests, matchless and interesting things that hardly exist except in this subject.

The researcher has introduced the theme into two demands: (the first: A brief translation of Imam Abu Amr Al Dani and a brief introduction to the book "Jamee ALBayan", and the second: Definition of the most important research's terms" illusion, mistake , and error").

Then he proceeded in explaining the approach of Imam Abu Amr Al Dani and his way of treating readers' illusions in a separate topic. Thereafter he elucidated in three topics the most important themes where he admonished on readers' illusions in the units of the major book, "Jamee ALBayan" Namely: (chapter of attribution, chapter of assets, and chapter of letters' spreading out) with quoted examples and their studies.

And then he concluded the research with the most important outcomes and recommendations that show the importance of caring of gathering researchers' admonitions from the readers for what happen as illusions from some readers, in order to enable a scientific , objective and comparative study.

Allah bestows Success.

***The good word and its influence on Da'wa
(spreading the word of Allah) on the light of Quran***

Dr.Odeh Abed Odeh Abdullah

Islam has paid more attention to the way of speaking and the way people speak to each other. It encouraged us to use good, thoughtful and righteous words while talking to others. Qur'an

also highlighted the importance of being polite while spreading Islam and that can be through wisdom, good advice and constructive argument. This study aims at emphasizing the importance of good word and its effect on people especially while doing Dawa (invitation to Islam). The core of the study is to raise a real awareness of this aspect.

**Some Evidence of Preference the Arabic Language
in the Holy Quran**

Dr. Hassan Bin Ghorm Al-Amri

There is an argument about why the Arabic language is the best of all the languages. This argument is still continuing until now. The people are of two types according to this concept.

One type says: It is the best because Allah Almighty has chosen it to be language of the Holy Quran. The other group refuses this opinion and for this reason comes this research to look through the Holy Quran and its Holy verses proving the outstanding and the distinguishing of the Arabic language.

The researcher desired that the evidence should be taken from the Holy Quran, so he should eight evidences about this subject:

The first evidence: The Arabic Language is the best because the Holy Quran has come down with it.

The second: The entertainment of the Holy Quran by the Arabic Language.

The third: Prophet's message is general for all: people and Jinn.

The fourth: The praise of the Holy Quran for the Arabic Language.

The fifth: The challenge of the Holy Quran to both : people and Jinn.

The sixth: The Holy Quran isn't Non-Arabs.

The seventh: The elaboration of the Holy Quran.

The eighth: Easiness and Facility of the Holy Quran.

There is an introduction for these eight evidences, followed by a conclusion. At the end there are two indexes showing the sources and the subjects.

Using The Mathematical Model in the Time Planning for The Holy Quranic Memorization

Dr. Mahmoud Abduljaleel Rouzen

The accurate planning is considered to be one of the most important criteria to govern the quality of institutional work. When the goal of the institution - any institution - is to serve the Holy Quran and its Sciences; it must be more effective to reach full proficiency.

The problem of time planning for the Holy Quran memorization is required to search unconventional solutions to it. This research tried to use mathematical modeling to formulate an approximate model that can be used for accurate planning and formulation of Holy Quran memorization curriculums in Quranic schools, which aspires to the ideal. The research is rooting for accurate planning; proposing three mathematical equations which fit three different categories of students in academic achievement. It is the result of several attempts to development and improvement. The research also gives the model and its applications in the form of easy-to-use software program.

ABSTRACTS OF THE ARABIC PAPERS
